

TWINZZ: THE MAGNETIC FLOWERPOT FOR INDOORS AND OUTDOORS

Twinzz is a new concept that really brightens up bare windows without sills, garden sheds, caravans and glass balconies. It's a newly developed magnetic flowerpot which consists of 2 halves; one half sits on the outside of the window, the other half on the inside.

Through super strong magnets on the flat side of the pot, the pot stays "floating" on the window. Even if it is made of 24mm thick HR double glazing! The stylish Twinzz is made of ABS in red, white and anthracite gray. The pot is 140 mm high and has a diameter of 220 mm.

The side that is flush with the glass is coated with a layer of rubber to stop slippage. The bottom of the pot houses the water outlet in the form of pre-cut holes which can easily be opened to the outside with a knife.

The Twinzz comes in an individual package with user instructions and if desired can be given a multi-colour company logo.
